X Notice to Comply w/ Sep. Rules

--- SEE OFFICE ACTION ON THE FOLLOWING PAGES ---

Art Unit: 1632

This application contains sequence disclosures that are encompassed by the definitions for nucleotide and/or amino acid sequences set forth in 37 CFR 1.821 (a)(1) and (a)(2). However, this application fails to comply with the requirements of 37 CFR 1.821 through 1.825 for the reason(s) set forth on the attached Notice To Comply With Requirements For Patent Applications Containing Nucleotide Sequence And/Or Amino Acid Sequence Disclosures and as indicated in the Raw Sequence Listing Error Report.

Applicants **must** comply with the sequence rules, 37 CFR 1.821-1.825 in response to this election/restriction. Applicant is requested to return a copy of the attached Notice to Comply with the response.

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19 and 21-24, drawn to transgenic non-human mammals, and methods of using, classified in class 800, subclasses 14, 3, and 4, for example.
- II. Claim 20, drawn to human hemoglobin, classified in class 530, subclass 385.

The inventions are distinct, each from the other because of the following reasons:

Invention I is patentably distinct from Invention II because transgenic non-human mammal and methods of using the same requires search and consideration of methods to generate transgenic animals. Such analysis is not required for the investigation of Invention II. Further,

Art Unit: 1632

the reagents (DNA, vectors comprising the same) employed in the methods for generation of transgenic mammals have materially different chemical structures and biological functions from the protein of Invention II. As such, the protein (hemoglobin) of Invention II can be used in materially different methods than in the methods for generation of transgenic mammals of Invention I would not be employed in the methods for generation of transgenic mammals of Invention I. The differences of Inventions I and II are further underscored by their divergent classification and independent search status.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
